When the time came to replace the original, 126-year-old shutters on this circa 1870 residence, the owners chose custom-made Elm Street Shutters from Shutterworks.

Shutterworks also provided the reproduction shutters for the Joshua Chamberlain home and museum, which the Pejepscot Historical Society is in process of restoring.

Why choose custom-made shutters from Shutterworks?

Experience. For over 20 years, we have been producing fine cabinetry and furniture at our family-run shop in midcoast Maine. This same skilled craftsmanship and attention to detail is reflected in our custom-made, hand-crafted interior plantation shutters and our exterior shutters.

Quality Materials. Our shutters are created from kiln-dry clear white pine, which, when properly treated and maintained, will last for decades, and are assembled with top quality fasteners and hardware.

Personal Attention. Because all orders are filled on an individual basis, you get the size, style, and fit you need, whether you are decorating a contemporary home or office, duplicating existing shutters, or restoring a historic building.

Exterior Shutters

Each exterior-shutter design is reproduced from existing shutters found on the historic homes, shingle-style “cottages,” and New England-style residences here in midcoast Maine. In addition to the designs shown here, we can also match most any shutter design you may require.

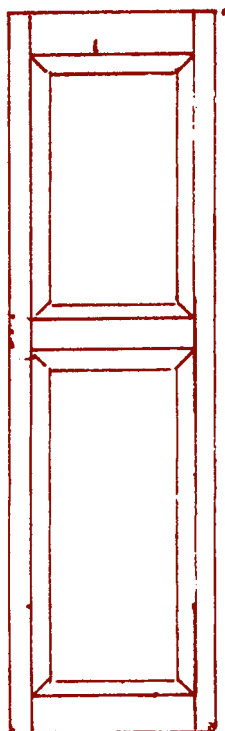

The Elm Street

Most commonly seen on historic homes and buildings from the 1830's. Stiles are $1\frac{3}{8}$ " x $1\frac{3}{4}$ " and the louvers project beyond the front face. The outside edges have a full-length $\frac{1}{4}$ " bead. Top and middle rails are $3\frac{1}{4}$ "; bottom rail is $2\frac{3}{4}$ ".

The Maine Street

This traditional shutter uses a $1\frac{3}{8}$ " x $1\frac{3}{4}$ " stile and features fewer louvers, set at a lower angle. A $\frac{3}{8}$ " half round moulding frames the louvers, providing a “heavier” look. Middle rail is $3\frac{1}{4}$ "; top and bottom rails are $2\frac{3}{4}$ ".

The Bayview Street

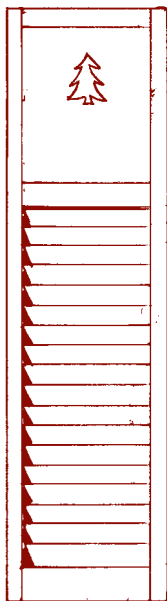

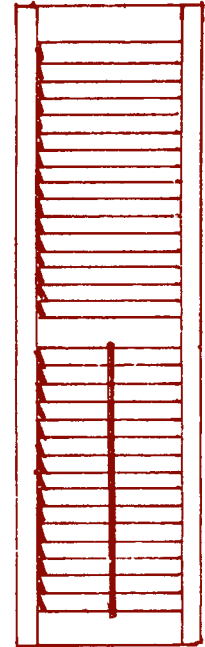

Available with raised or flat panels, for exterior use. Stiles are $1\frac{3}{8}$ " x $1\frac{3}{8}$ "; middle rail is $3\frac{1}{4}$ "; top and bottom rails are $2\frac{1}{2}$ ". These shutters can also be made for the lower half of a window, with one panel and no cross rail.

The Ames Street

This shutter is used on many of the historic homes in our area. Stiles are $1\frac{3}{8}$ " thick x $1\frac{3}{8}$ " wide; top and bottom rails are $2\frac{1}{2}$ "; center rail is $3\frac{1}{4}$ ". The center operator bar is attached to fixed louvers.

The Pine Street

I found this shutter hanging on a fishing camp at one of the lakes in our town. I liked the look and proportion so we designed one for our shop. I also noticed this same basic shutter design but with a sloop cutout was found on coastal cottages and bungalow-style houses. Because of its simple design it also fits nicely on a ranch-style home of any age.

The stiles are $1\frac{3}{8}$ " thick x $1\frac{1}{2}$ " wide; the top rail is 2"; the middle rail is $2\frac{1}{2}$ " and the bottom rail is $3\frac{1}{2}$ " wide. As with all of our shutters these measurements can be changed to meet your needs. The top panel is made from $\frac{3}{4}$ " pine and can be ordered with our cutouts or something personal for you.

If you prefer your own cutout design, just keep it simple and we will try our best to do it.

All shutters are glued with West System Epoxy for long life.

Exterior shutters are finished with five coats of oil-based or latex paint, depending on your preference. Hardware is available to complement your choice of design.

Interior Shutters

Shutterworks plantation shutters are an attractive, energy-saving alternative to curtains and draperies. Use them to accent an opening or pass-through, or to divide a room with style.

Crafted from kiln-dry soft and hard woods, our interior shutters are custom made to fit any size window or opening. All blinds pivot in hardwood strips, with nylon washers and nylon pins between the blinds and frame. Small brass screw-eyes are used to fasten the operator to the blinds.

We also offer custom interior raised and flat panel shutters in full or half-length window sizes. We have several different raised panel shutters to choose from to complement your trim and room design. From painted to elegant hardwoods let us make your next shutters.

Additional Products

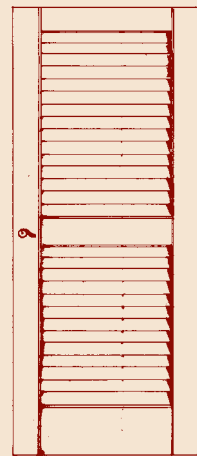

We now offer operating louvered doors for the interior of your home, bathroom, sunroom, or wherever privacy and airflow are important.

We also offer folding screens for interior privacy made in an oriental design in black lacquer or Chinese red. You can call us for more information on these new items.

In addition to our interior plantation shutters, SHUTTERWORKS can provide many other styles of interior shutters such as solid panel, either flat or raised, in full window length or half, in your choice of color or in natural wood.

Chestnut Hill Screen Door

I first saw this door when I went to Williamsburg and noticed the practicality of its simple design and function. Finally a screen door that allows air and light to flow through yet gives privacy and protection from the weather. With fixed louvers facing down and screens top and bottom on the inside, this $1\frac{3}{8}$ " thick door can be made to fit most standard openings and can be custom fitted for special needs. The screens are set into a rabbited cut in front of the upper and lower louvers and removes for easy cleaning. The measurements are $4\frac{1}{2}$ " stiles, $4\frac{1}{2}$ " top rail, $5\frac{1}{2}$ " middle rail and a bottom rail of 8". $1\frac{3}{8}$ " thick stock is used and a $\frac{1}{4}$ " bead on the outside of the door running full length on the inside edge of each stile completes the detail. As with all of our products, West System Epoxy is used on all joints and we offer complete painting services.

Oriental Privacy Screens

Here is our version of the Shoji screen but with our own louvered style. Each screen is made with $1\frac{3}{8}$ " x $1\frac{3}{8}$ " stiles and $2\frac{1}{2}$ " bottom and middle rails. We gently curve the top rail and middle rails. Narrow louvers are set closely together and each screen has tapered legs. This unit usually comes with three screens but can have four for wider openings or wall spaces. They are painted either black or Chinese red lacquer.

Screens come in 12", 14", 16", or 18" width and 4, 5, or 6 feet tall. These screens can add beauty and charm to any room or wall and can create a space where none existed before. Call us for more details on any of these new products.
